### Abstract

The PIBIC-EM is an initial program of Campinas of scientific research. It lasts for one year and is designed for high school students from public schools in the Campinas region. In August 2014 the Clinical-Qualitative Research Laboratory (LPCQ), which is linked to the Faculty of Medical Sciences of Unicamp received 4 students to learn about the world of scientific research. The aim of this study was the construction of literature reviews. Each student PIBIC-EM chose a theme to develop. The subjects studied were: The Trichotillomania Reported on Youtube; Nursing Education; Case Reports Graves of Schizophrenia; Caregivers of Autistic and Media. The specific objectives were tied to individual projects of researchers beginners. At the end of the course the students were able to complete their own research. The experience of being part of a training program for scientific research increased awareness of young people for choosing the academic and professional career. There was a significant learning.

*Key words: Qualitative Research; psychology; psychiatry.*

### Introduction

This research is linked to the Clinical-Qualitative Research Laboratory (LPCQ) tied the Faculty of Medical Sciences of UNICAMP.

After 6 months of lectures, lectures and living on campus each student PIBIC-IN chose a research topic to develop.

The overall objective was to build literature reviews. The subjects studied and the specific objectives were tied to individual projects of young researchers beginners.

### Results and Discussion

We conducted a literature review of studies with the following titles:

1. The universe of trichotillomania on Youtube: understanding the feelings experienced and shared by people with trichotillomania.
2. What does the scientific literature of the last five years regarding the training curriculum of nurses and the experiences of nursing students?
3. Serious Case Reports of Schizophrenic Patients.
4. Emotional Experiences of caregivers of Autistic and Autism Reported For the Media: A Literature Review.

### Conclusions

During the period of 1 year we had the opportunity to meet the LPCQ surveys, through lectures of its researchers. We attend specific classes of medical residency program in psychiatry at the FCM. Learn to do scientific research: understand the importance of systematization, the formulation of the hypothesis; definition of objectives and the choice of method. We got to know several facilities of UNICAMP and enjoy its infrastructure.

### Acknowledgement

We thank the entire team of PIBIC-EM, which gave us the best infrastructure to carry out our activities; the UNICAMP staff who welcomed us with loving way; teachers who had classes; to monitor Bruno and Professor Egbert, the affection and dedication that had us; our schools who have trusted our potential to suggest our applications to PIBIC-EM
